

ON JOB TRAINING (OJT) REPORT ON
Designing a Dynamic Desktop Inventory Management System

Submitted by: -

Ms. Alisha Khatri

N.E.B Register No: 793272450003

Under a supervision of: -

Er. Samrat Simkhada

Budhanilkhantha-10, Kathmandu

In the partial Fulfillment of: -

Computer Engineering under Technical and Vocational Stream in
Secondary Level Education (Grade-12)

Submitted to: -

National Examination Board (NEB)

Sanothimi, Bhaktapur

Mangsir, 2080

CERTIFICATE OF APPROVAL

This On-Job-Training (OJT) project work entitled **designing a Desktop Application Inventory Management System** by **Ms. Alisha Khatri** under the supervision of **Er. Samrat Simkhada** at Bal Uddhar Secondary School, Kathmandu, Nepal is hereby submitted for the partial fulfillment of Computer Engineering under Technical and Vocational Stream in Secondary Level Education (Grade-12) during the academic year of 2080 B.S is accepted.

CERTIFICATE OF ON-THE-JOB TRAINING PROJECT WORK

"Learn Today, Lead Tomorrow"

बाल उद्धार माध्यमिक विद्यालय
BAL UDDHAR SECONDARY SCHOOL

[A Model Community School Selected by Government of Nepal.]

Budhanilkantha Municipality-10, Kapan, Kathmandu, Ph.: 01-4823399/4810168

Ref. No.: 2080/81/169

Date: 2080/08/27

TO WHOM IT MAY CONCERN

This is to certify that Ms. Alisha Khatri, daughter of Narayan Bahadur Khatri had completed her OJT training in 2080/02/19 to 2080/08/25 from this school. During this working period, we found her sincere, honest, hardworking and dedicated person with professional attitude and very good job knowledge. She is amiable in nature and her character is well. We have no any objection to allow her in only better position and have no liabilities in our school.

We wish her every success in life.

Er. Uday Raj Karki

Program Coordinator

DECLARATION

I hereby declare that I carried out OJT project work entitled designing a Desktop Application Inventory Management System under the supervision of Er. Samrat Simkhada. I declare that to the best of our knowledge, no part of this report has been submitted here or elsewhere in previous application for award of degree. All sources of Knowledge used have been duly acknowledged.

Trainee

Ms. Alisha Khatri

N.E.B Registration No. 793272450003

Bal Uddhar Secondary School

Budhanilkantha-10, Kathmandu

ABBREVIATION

OJT	:	On-Job-Training
IT	:	Information Technology
VP	:	Visual Programming
NEB	:	National Examination Board
Er	:	Engineer
B. S	:	Bikram Sambat
Fig	:	Figure
ICT	:	Information and communication Technology
No	:	Number
MB	:	Mega Byte
RAM	:	Random Access Memory
OS	:	Operating System
XAMP	:	X-Operating System, Apache, MySQL, PHP, Perl.
JS	:	JavaScript
SQL server	:	Structure Query language
VS	:	Visual studio
Etc.	:	ET ceter

PREFACE

The present report is the outcome of OJT project work on “Inventory Management System”. It is prepared to fulfill the requirement of computer engineering in technical and vocational stream in school level education (grade-12). It presents the OJT knowledge, skill and experiences gained through it. The prime focus of this report is to highlight the implementation of theoretical knowledge and Practical skill gained at school to real workplace. It describes the dynamic desktop application Designed and develop as an OJT project work. The main source of data is OJT Work place administration and other source are OJT project supervisor’s tutorial, Website etc. All this information were basically secondary data.

ON-JOB-TRAINING (OJT) is the way to imply the Trainees his/her knowledge and Skills to institution. Based on this program, he/she will be able to determine and be prepared to real working world. This program will make huge impact on student study because it also allows to experience a real workplace environment.

For students and they can make use of the things they have learned throughout the training. The importance of OJT is to prepare the students to real working world. The training will help the students to practice his/her knowledge learned from grade 9th to 12th.

ACKNOWLEDGMENT

Foremost, I would like to thank the National Examination Board (NEB), Bal Uddhar School for including such a big opportunity in our syllabus.

I express my gratefulness to my parents for motivating and supporting me during the periods of on job training.

I express my gratefulness to my school Bal Uddhar secondary school for giving me such great opportunity of doing on job training.

I would also like to extend my thanks you to Er. Samrat Simkhada and Er. Uday Raj karki for his suggestions and help in all possible ways during internship period.

Last but not least, I would also like to thank all the staffs/ friends of my school for their co-operative and helpfulness attitude during my training.

Ms. Alisha Khatri

CHAPTER 1

1. INTRODUCTION

1.1 Overview

The desktop application is a program designed to run on a computer (precisely, desktop) and use the resources from a system to perform its functions. The programs of desktop applications run on the top of operating systems such as macOS, Linux, and Microsoft Windows.

Desktop application are software programs run locally on computer devices. They aren't accessible from browser, like web based apps, and require deployment on a personal computer or laptop.

Some desktop application such as word editor, photo editing apps and media player allow you to perform different tasks while other such as gaming apps are developing purely for entertainment purpose. Desktop application doesn't require an URL because it cannot be browser through internet.

The first page of application is called home page. The desktop application is mostly used in one computer where it built but we can also install into another using external device such as pen drive.

Because this application is run on device and doesn't require an internet connection so it has high security and cannot accessed through internet.

The OJT of designing a desktop application on inventory management system is to provide an information store in inventory such as stock, price, and customer. Which helps company or person to easily access required information.

It is an integral part of school level education under the technical and vocational stream. Throughout OJT project work, the focus has been on storing an inventory in an easy and intelligible manner.

1.2 Statements of problems

The problem definition of the system is to build an application for inventory management system. The main aim of the project is to help the business easily and efficiently for manage the ordering, stocking, storing and using of inventory.

Since the OJT is completely based on desktop application. It will provide the more privacy to the business and it will help them on business and stock exchange.

1.3 Objective

The main objective of developing an inventory management system is to help business easily and efficiently.

The major objective of OJT project is:

1. Material availability.
2. Better level of customer service.
3. Maintaining sufficient stock.
4. Optimizing product sales.
5. Cost effective storage.
6. Avoiding out-of-stock situations.

1.4 Scope

This document covers the requirement for the inventory management system. This software will provide a graphical environment in which the users of the system will be able to perform various operations that are associate with storing, maintaining, storing updating and retrieving product information.

This system will capture information about customer's personal details products and their quantities, storing updating and retrieving in fast and accurate way.

1.5 Application

The major application of inventory management system is:

- a) To provide faster purchasing facility.
- b) Fulfill customer orders from multiple sales channel.
- c) To track stock level.
- d) To creating value and optimize cost.

CHAPTER 2

2. OJT WORKPLACE

2.1 Organization Profile and Structure

My OJT workplace was my own school/ college Bal Uddhar Secondary School, Budhanilkantha-10, Kathmandu Nepal. Due to different technical up-downs I worked at our own school the whole internship completed under the supervision of our software teacher as well as supervisor Er. Samrat Simkhada. I could complete my assignments and work with the help of all other teachers in school. As the student of school over years I could gain friendly environment from teachers and other student in all aspects and helps. Located at the budhanilkantha-10 nearby police station. Bal Uddhar School provided with all required technologies and devices to make the OJT more ease and better. The time of work was same of the school time started at 7 am and ends at 11 am with necessary breaks.

2.2 Services and Facilities

The core service of my OJT workplace i.e., Bal Uddhar is to provide Web Service, Web Development, Graphic Design, News portal, Graphic Solutions etc.

The facilities provided by my OJT workplace are:

1. Well-equipped laboratories facility.
2. Facility of internet.
3. Drinking water facility.

CHAPTER 3

3. OJT PROJET TECHNOGOGY AND IMPLEMENTSTION

3.1 Technology Overview

The desktop technology selected for implementing an OJT project work on “Developing a Desktop Application Inventory Management System” is C#. The application software used for designing, developing and running an application are: - Visual Studio, SQL server, SQL server management studio 19 and web Browser.

C#

C# is an advanced, safe, and object oriented programming language designed and developed by Microsoft Corporation. C# enables developers to build many type of secure and rebuts applications that runs in .net. It is a free and open source development platform for building apps run on widows, macOS, iOS and android. C# is used for developing a mobile application, Desktop application, web application and games etc. Nowadays c# application is really popular for developing a desktop application games etc.

C# is used for developing machine learning applications using frameworks. Visual studio is used for developing application in c#. it allows developed to create efficient programs that are easy to maintain and debug.

SQL Server

SQL server is a relational database management system. As a database server that stores and retrieves data as requested by other software application on the same computer or remote computer using client-server model.

The intension of SQL is to store, retrieves, manage and manipulate data within a database management system. It is considering that the SQL server is better server because it provides more advanced security features, such as low-level security and data encryption. This makes writing database applications easier and quicker (and therefore cheaper) as well as making them more reliable, scalable and secure.

SQL Server Management Studio 19

SQL server management studio is an integrated environment for managing any SQL infrastructure from server to Azure SQL database. to run an SSMS SQL server is most needed because it is use to manage, access, configure, administer, and develop all the component of SQL server. SSMS has a more robust feature set than MySQL Workbench, including: Extensive database management tools.

How to download SQL Server management studio 19?

1. Open Google chrome
2. Search an SQL Management server 19
3. Open an given link

<https://learn.microsoft.com/en-us/sql/ssms/download-sql-server-management-studio-ssms?view=sql-server-ver16>

4. Click on the following

Fig:3.1.1 SSM

5. Click on following

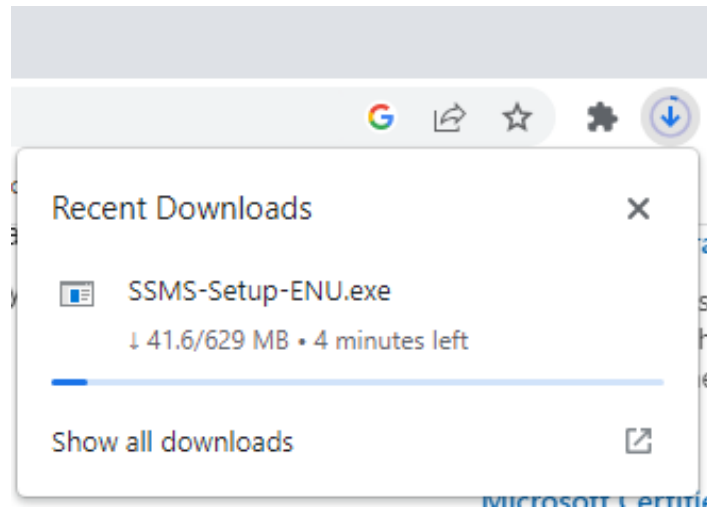

Fig: 3.1.2 SSMS setup

6. Install an SQL server management system

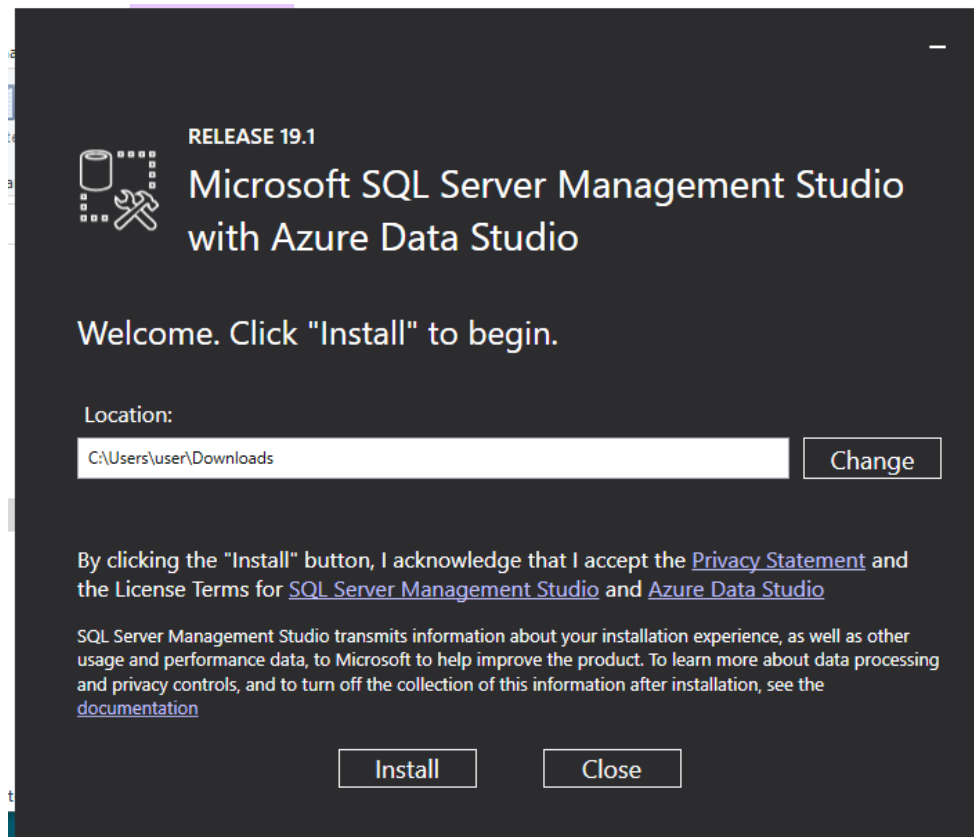

Fig: 3.1.3 Installation of SQL server management studio 19

Visual studio (2022)

Visual studio is a fully featured IDE that is used to develop computer programs including website, web apps, desktop apps, web services and mobile apps. Visual studio uses Microsoft software development platforms such as windows API, windows form etc. by using a visual studio it helps developer to increase agility and productivity. visual studio includes a web-site editor and designer that allows web pages and windows form to be authorize by dragging and dropping widgets.

Visual studio supports 36 different programming languages and allows code editor and debugger to support nearly any programming language such as c, c++, c#, java, python, HTML, CSS etc. the most basic edition of visual studio is community edition it available

free of charge. The visual studio community edition is “free fully-featured IDE for students, open-source and individual developers.

How to Download.

1. Open Google chrome.
2. Search visual studio
3. Open given link

<https://visualstudio.microsoft.com/vs/community/>

4. Click on download

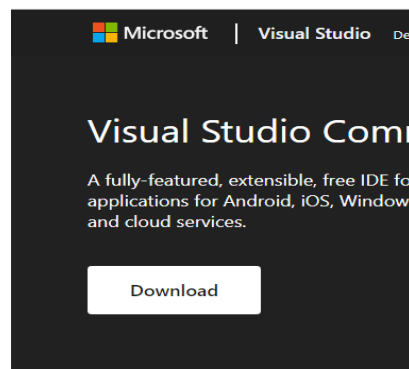

Fig 3.1.4 Visual studio download button

5. Click on the top right download button

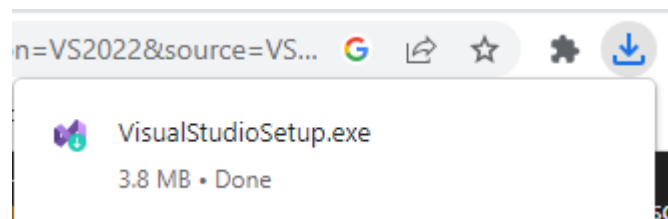

Fig 3.1.5 Visual studio downloaded

6. Visual studio setup

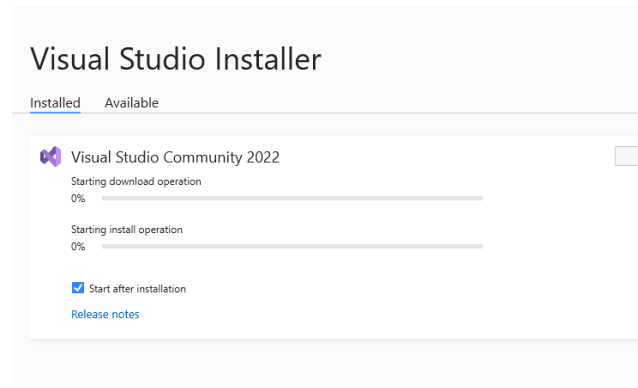

Fig 3.1.6 Visual studio setup

Bunifo framework

Bunifo is a framework which helps to get all the tools that we need to maximize our creativity make us more productive and save our money in visual studio.

It provides all the tools that we need to create beautiful, modern desktop applications.

Draw.io

Draw.io is free online diagramming tool that allow us to create flowcharts, diagrams. Mind maps, organization charts and much more. A web based application draw.io is fully integrated with Google drive this means we can automatically save the result of our work in Google workplace or Gmail account.

3.2 Tools used in visual studio

Panel

The panel is used as a controller for other controls on the page. It controls an appearance and visibility of the controls it contains. It allows controls contain programmatically.

One of the major use of panel is too control when we need to show and hide a group of controls instead of show and hide individual controls we can simply hide and show single parent panel and hide child controls.

Properties of panel:

Border Style: indicates whether the panel should have border.

Background image: the background image used for the control.

Picture Box

The windows forms picture Box controls used to display graphics in bitmap, gif, jpg and icons format.

Properties of picture box:

Image: the image displayed in the picture box.

Error image: Image to display when the load of another image fails.

Size mode: control how the picture box will handle image placement and control sizing.

Textbox

The textbox control is generally used for editable text although it can also be made read-only. Text box can display multiple lines, single text to the size of the control and add basic formatting. The text box control allows a single format for the text displayed or organized in control.

Properties of picture box:

Text: the text associated with control.

Button

A button is an essential part of an application, or software or webpage, it allows the user to interact with the application or software. For example, the user wants to exit from the current application so, user click the exit button which closes the application.

Properties of button:

Font: it is used to set the font of the button.

Fore color: it is used to set or get the foreground color of the button control.

DataGrideView

The DataGridView controls provides a customizable table for displaying data. The DataGridView class allows customization of the cells rows, columns, and borders through the use of properties such asDefaultCellStyle, ColumnHeadersDefaultCellStyle, CellBorderStyle, and GridColor.

Properties of DataGridView are:

Visible columns: gets the collection of visible columns.

Visible row count: gets the total number of rows displayed within a grid.

Border color: gets or sets the border color.

Columns: provide access to the grid collection of columns.

Progress Bar

A Progress bar is a control that an application can use to indicate the progress of the lengthy operation such as calculating a complex result, downloading a large file from the website.

Properties of progress bar:

Font: Gets or sets the font of text in the Progress Bar.

Fore Color: Gets or sets the foreground color of the control.

Checkbox

The checkbox is the part of windows from which is used to take input from the user or in other word, checkbox allows us to select single or multiple elements from the given list or it can provide us options like yes or no, true or false etc. it can be display as a image or text or both.

Properties of check box:

Checked: the checked properties return either true or false.

Checked state: the checked state properties return either checked or unchecked.

Combo Box

In windows forms, combo box provides two different feature in a single control. It means combo box works as both textbox and list box. In combo box only one item is displayed at a time and the rest of the items are present in drop down menu.

Properties of combo box:

Items: the items in the combo box.

Text: the text associate with control.

Fore control: the fore ground color of this component which used to change the color of text.

Label

Windows Forms Label controls are used to display text or images that cannot be edited by the user. They are used to identify objects on a form to provide a description of what a certain control will do if clicked.

Properties of label:

Image: Gets or sets the image that is displayed on a Label.

Back color: Gets or sets the background color for the control.

Border Style: Gets or sets the border style for the control.

Background image: Gets or sets the image rendered on the background of the control.

3.2 ER Diagram

ER diagram the data modeling method used in software engineering to produce conceptual data model of an information system. ER diagram also often used in conjunction with data flow diagram (DFD), which maps out the flow of information for process or system.

It helps to understand the foundation of data information store within the database.ER helps to represent ER model in in database which make them easy to convert into relation. ER

diagram doesn't require any technical knowledge and hardware knowledge. These diagram are easy to understand and it gives a stander solution for visualizing the data logically.

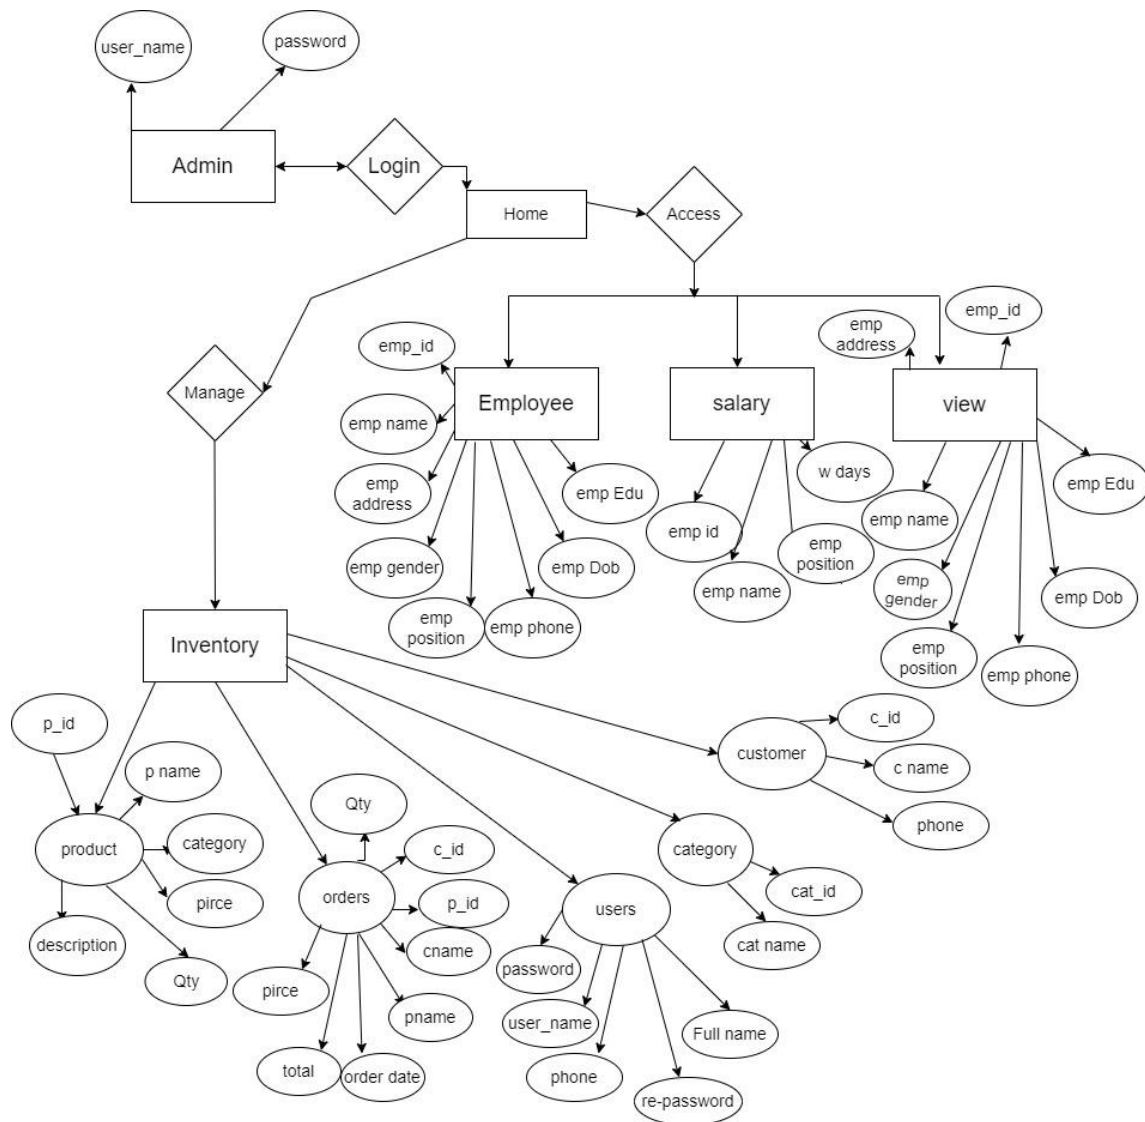

Fig3.2.1 ER diagram of inventory management system

3.3 Use case diagram

A use case diagram is a way to summarize details of a system and the users within that system. Use case diagram describe the high-level functions and the scope of a system. It can summarize the detailed of our system (also known as actor) and their interaction with system. To build a

use case diagram different type of symbols are used every symbol have a different meaning and task such as, Actor- perform a specific role that can be a human, external hardware or other system, use case – it helps to specify the task of a system etc.

The main purpose of use case diagram is: -

- ✓ Specify the context of a system.
- ✓ Capture the requirements of system.
- ✓ Validate a system architecture.

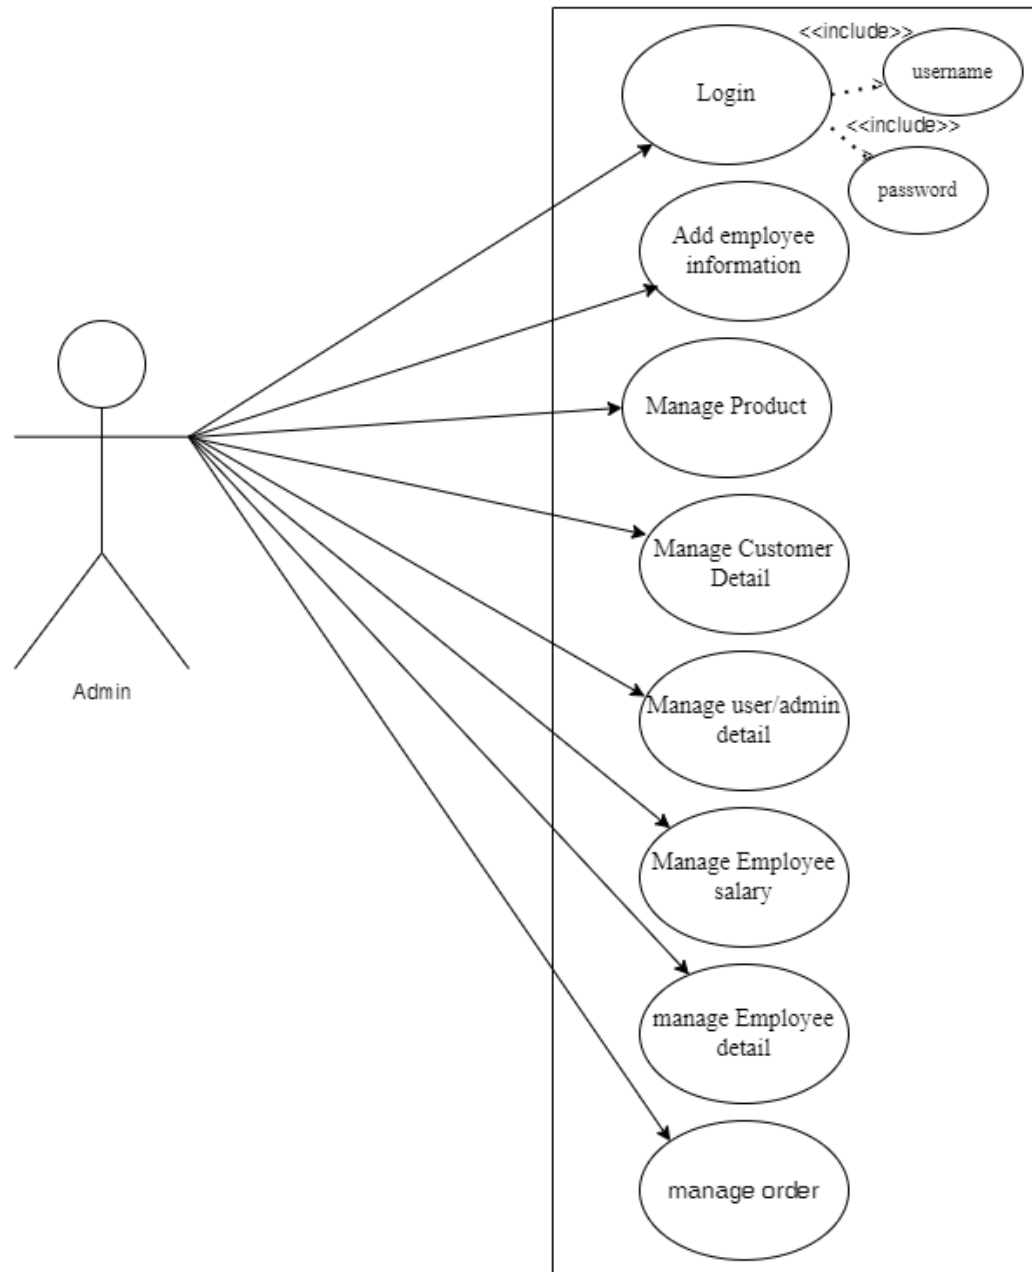

Fig 3.3.1 Use case diagram of inventor management system

3.4 DFD diagram

Data flow diagram is a way of representing a flow of data through a process or a system. The DFD also provides information about the outputs and input of each entity and process itself.

The main purpose of DFD is to help us to better understand process or system operations to discover potential problems improve efficiently and develop better process.

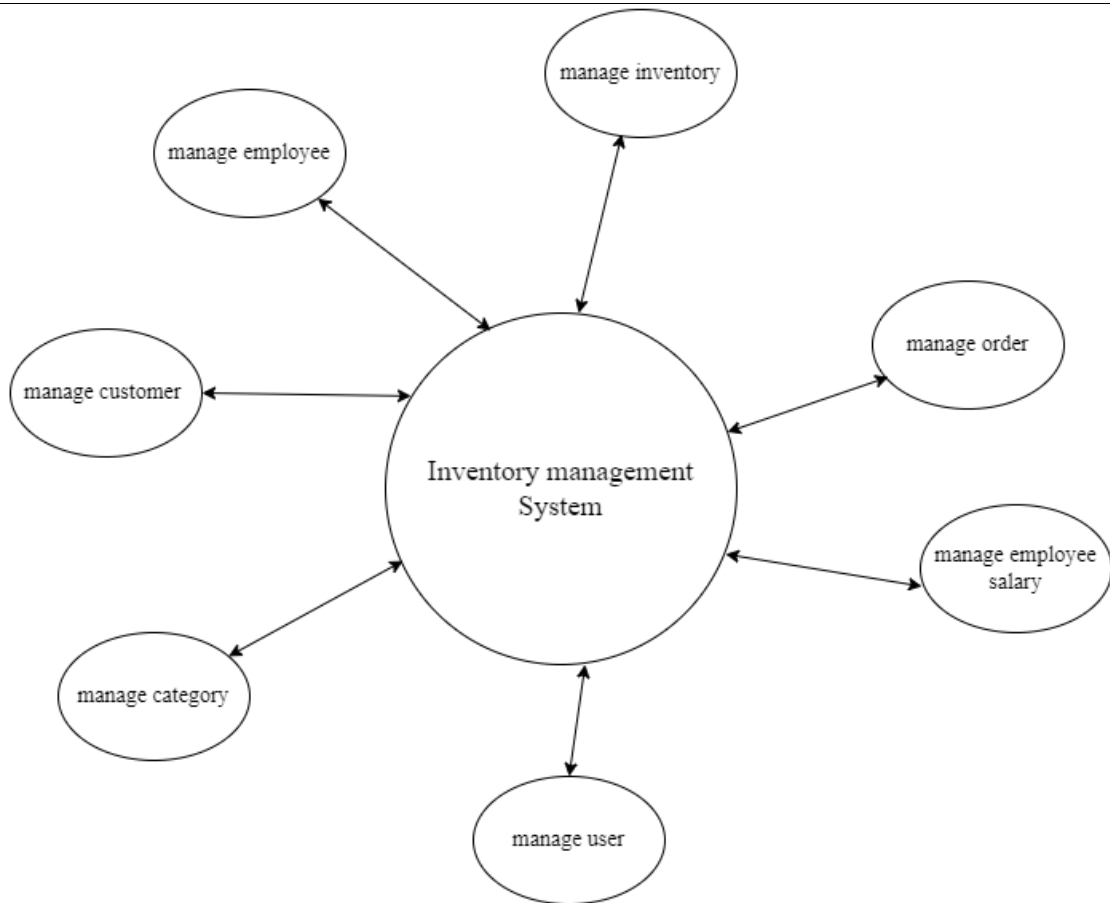

Fig 3.4.1 DFD level 0 of inventory management system.

3.5 Gantt charts

A Gantt chart is a bar chart that illustrates a project schedule. It was designed and popularized by Henry Gantt around the years 1910–1915. Gantt charts are useful for planning and scheduling projects. They help us to assess how long a project should take, determine the resources needed, and plan the order in which we'll complete tasks. They're also helpful for managing the dependencies between tasks

Task	Start Date	End Date	Duration	Ashar	Shrawn	Bhadra	Ashwin	Kartik	Mangsir
Planning	3/20/2080	4/5/2080	15						
Requirement Analysis	4/5/2080	4/20/2080	15						
Design	4/20/2080	5/10/2080	20						
Coding	5/10/2080	6/5/2080	25						
Testing	10/5/2080	7/10/2080	60						
Documentation	4/5/2080	7/10/2080	90						

Table 3.5.1 Gantt chart of inventory management system.

3.6 Time Schedule, Hardware and Software Requirements

The time schedule required for implementing a project “Designing an inventory management System” is

S.N	Time duration	Tasks	Remark
1	2080/03 Week3 (3days)	• Lab visit and maintain the computer. • Study about OJT and its important. • Discussion about OJT project.	4hrs/days
2	2080/03 Week3 (3days)	• Data entry (student information) • Data entry(result entry)	4hrs/days

3	2080/03 Week4 (3days)	• Divide the project and learning about the project. • Study about desktop application and how its project done.	4hrs/days
4	2080/04 Week4 (3days)	• Basic study about c# and its variable • Study about basic programming knowledge.	4hrs/days
5	2080/04 Week1 (3days)	• Decide a project on inventory manage system. • Study about the project requirement. • Download a visual studio.	4hrs/days
6	2080/04 Week1 (3days)	• Study about visual studio tools and templets used in project. • Study about c# language and its coding.	4hrs/days
7	2080/04 Week2 (3days)	• Study about Bunifo framework. • Study about Guna framework • Learn about SQL server.	4hrs/days
8	2080/04 Week2 (3days)	• Download SQL server and learn how to connect SQL server with visual studio. • Study about database and its syntax.	4hrs/days

9	2080/04 Week3 (3days)	- Start doing project on inventory management system. - Design an overall project.	4hrs/days
10	2080/04 Week3 (3days)	- Create a login form and code for login form (using textbox, label, button, checkbox, picture box etc.) - Solving error.	4hrs/days
11	2080/04 Week4 (3days)	- Create a home form which contain an employee form, inventory form, salary and view form. - Coding for home form.	4hrs/days
12	2080/04 Week4 (3days)	- Design an employee form using (data grille view, combo box, date and time piker, label, textbox etc.) - Coding for above page.	4hrs/days
13	2080/05 Week1 (3days)	- Design an inventory form which include various child form using (panel, customer button, label etc.) - Code for inventory form.	4hrs/days

14	2080/05 Week1 (3days)	• Design a child form of product form using (label, textbox, combo box etc.) • Code for above form	4hrs/days
15	2080/05 Week2 (3days)	• Design a child form called customer form using (label, textbox, button etc.) • Code for above form.	4hrs/days
17	2080/05 Week2 (3days)	• Design a child form called user form using (label, textbox, button etc.) • Code for above form).	4hrs/days
18	2080/05 Week3 (3days)	• Design a child form called order form and combine a product form and customer form (using DataGrideView, label, textbox, panel etc.) • Coding for above form.	4hrs/days
19	2080/05 Week3 (3days)	• Design a child form called category form (using textbox, label, button etc.) • Code for above form.	4hrs/days
20	2080/05 Week4 (3days)	• Design a salary form (using textbox, label, label etc.) • Code for above form.	4hrs/days
21	2080/05 Week4	• Design a view form (using textbox, label button etc.)	4hrs/days

	(3days)	• Code for above form.	
22	2080/06 Week1 (3days)	• Test an overall application if its working well. • Rearrange error application. • Add an color in overall project.	4hrs/days
23	2080/06 Week1 (3days)	• Study about similar application in net beans using java application. • Study about net beans tools and XAMPP application.	4hrs/days
24	2080/06 Week2 (6days)	• Starting to prepared a presentation file for demo presentation. • Learn an overall project and study about how it is working.	4hrs/days
25	2080/06 Week2 (6days)	• Give an presentation and staring to rearrange application according to feedback from teacher.	4hrs/days
26	2080/08 Week2 (3days)	• Orientation on SRS making process and study rules for making an SRS document. • Study about SRS of my project and start to learn from different sources.	4hrs/days

27	2080/08 Week2 (3days)	- Starting to make an SRS document. - Study about all the diagram used to describe a overall project.	4hrs/days
----	-------------------------------------	--	-----------

Table 3.6.1 Logbook

3.7 Hardware and Software Requirement for OJT and Project Work

The table below shows the hardware and software required for designing and developing OJT project. A computer system required is general purpose computer system which can run basic computer application

The Hardware and software required for implementing an OJT Project "Designing a Dynamic Website Blood Bank System" are:

S.N	Name	Specification	Quantity
1	Computer System	Processor: Intel(R) Core(TM) i5-9400 CPU Installed RAM: 8.00 GB System Type: x64 based processor and OS. Display: 1366 x 768 resolution	1
2	Operating System	Windows 10 Pro Education	1
3	Microsoft Office	2016, 64 Bits	1
5	SQL server management studio – 19	Higher resolution monitor.4GB RAM etc.	1

6	Web browser	Google chrome	1
7	Microsoft visual studio	RAM: 8.00 GB System type: x64 based processor	1

Table 3.7.1 Hardware and software requirement

CHAPTER 4

4. OJT SUMMARY

4.1 Observation

I observed different than the normal daily life of classroom and laboratories during six months of OJT at Bal Uddhar Secondary School. There is boldly technical observation.

The major observation that I observed during my OJT project on “desktop application “are:

- i. Practically know how to add function and inventory management system in c# project.
- ii. Practically observed that how to connect with SQL server database.
- iii. It is observed that high level of software and hardware required to build system.
- iv. It is observing that tools of visual studio are used to make different page using different feature.

4.2 Learning experience

The experience gained during the six months of OJT at Bal Uddhar School help me to understand the professionalism of practical skill that I learn in my school laboratories, the professional working environment of workplace, the importance of communication, and coordination among different unites or employees of organization etc.

The major experiences that I experienced during my OJT work on “Desktop application development” are:

- a) Experienced some differentiation in practical implementation of knowledge, theories and skill that I learn in classroom and laboratories into real project.

- b) Experience some intellectual as I studied the different research papers related to the desktop design and development through that exceptionally helped in implementation of my own project work to grate level.
- c) Experience the lack storage and performance skill of computer in laboratory.
- d) Experience more greatness, willingness and co-operation with project supervisor whose unparalleled knowledge, moral fiber and judgment along with know-how was an immense support in completing my OJT Project work.

4.3 Learn skill

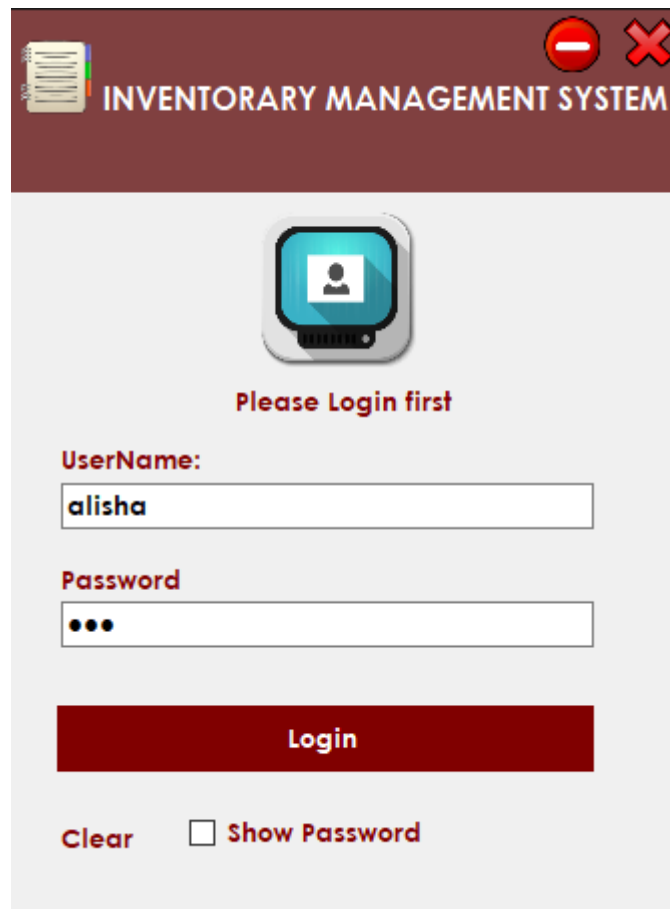

I learned different professional skill under technical and vocational education i.e. desktop technology during the six months of OJT at BAL Uddhar Secondary School, Kathmandu, Nepal.

The major skills that I learned during my OJT project work on “Designing a dynamic website on inventory Management System” are:

- a) Creating a login page using c# language.
- b) Create a home page using c# language.
- c) Create an employee management page using c# and SQL server.
- d) Create an inventory management system using C# and SQL server.
- e) Create a salary and view page using C# and SQL server and different tools.
- f) Insert all the data and information in the all the page and test the application.

In addition to ICT education based technical skills learnt during OJT project work, I learned to prepare the OJT log book, OJT report and OJT presentation document. I also learnt about how to present myself and the OJT project work.

The practical demonstrations of above skills that I learnt during my OJT project work are:

INVENTORY MANAGEMENT SYSTEM

4.3.1 Login page

In login page I have create a username and password which is directly connect to the user page which is located at inventory form. I have added a check box which helps to show and hide the password. It is connecting to the inventory form with the help of SQL server database. For login button is used to login to the system if the password is correct then the system would agree welcome the user if the password is incorrect then the system won't login and say incorrect password or username. Multiple user can login to the system I same device if the admin allows the user to login to the system.

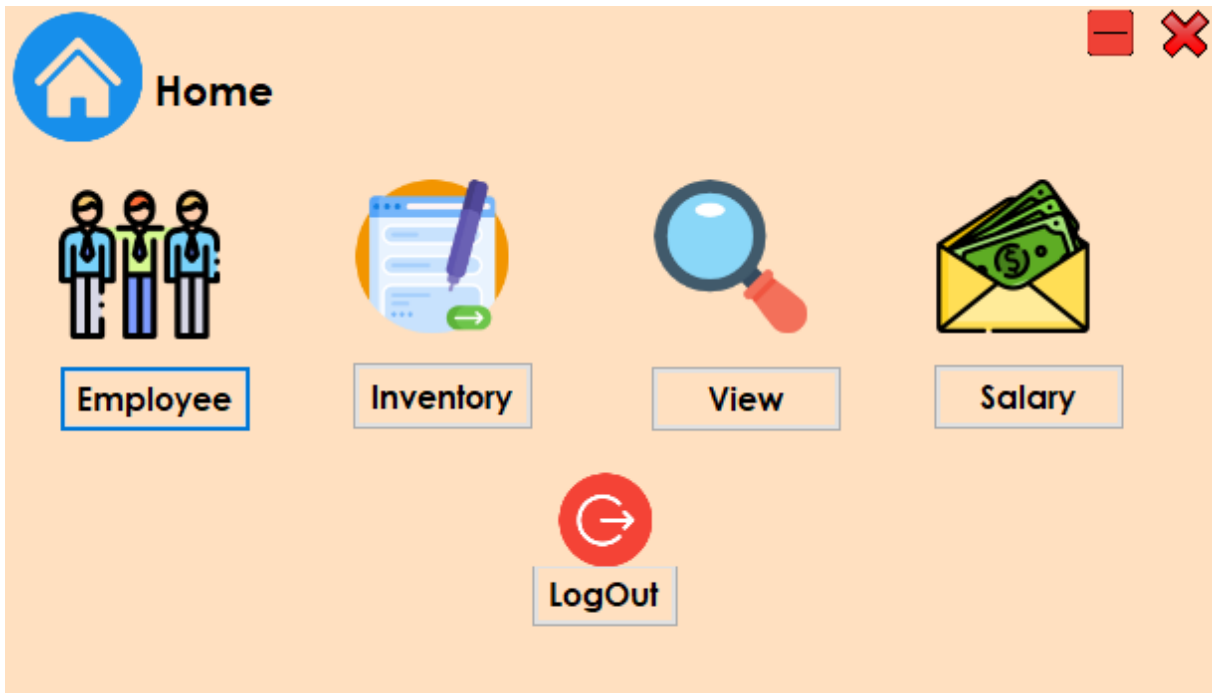

Fig 4.3.2 Home page

In home page, there are different type of page which have their own work. It is connect through the help of programming.

Empid	EmpName	EmpAdd	EmpPos	EmpDob	EmpP
1	Alisha Khatri	kapn	Receptionist	Thursday, Septe...	98076!
2	Yurisha Khadka	kapn	junior Developer	Saturday, Septe...	98076!
3	Binisha Luitel	kapn	Accountant	Saturday, Septe...	97065!
4	sunita bhujel	kapn	Manager	Saturday, Septe...	98076!
5	binod bista	jhumka	Manager	7/27/2000 12:00...	97907!

Fig 4.3.3 Employee form

The above table is the employee table which helps to collect the information of employee. These table are made by using various tools and it helps to make it easier to find the employee information.

Fig4.3.4 Inventory form

The above fig is the inventory form which include the various information of inventory and goods. In this form there is one parent form and alongside there are various child form which is connected using panel.

No	product id	Name	Qty	price	Description	category		
1	1	dell	3	8000	i5	computer		
2	2	mobile	8	10000	sd	mobile		
3	3	tecno	9	11000	98	mobile		
4	4	earpod	56	6000	43	mobile

Manage Categories Back

Fig 4.3.9 Category form

This is a category form which differ the category of goods or a product. This page is manly developing to help the product form by easily separating the category of the goods.

View Employee Id Refresh Home

Employee Id	3	Employee Position	Accountant
Employee Name	Binisha Luitel	Employee Dob	Saturday, September 3, 2005
Employee Gender	BBA	Employee Phone	970654323
Employee Address	kapan	Employee Education	BBA

Fig 4.3.10 View form

This form is manly developing to make easier to find the information of the employee by searching their employee id.

CHAPTER 5

CONCLUSION, RECOMMENDATION AND SUGGESTION

5.1 Conclusion

A desktop application on inventory management system is developed as an OJT project work. The application includes the different data and information of employee and company inventory such as employee name, address, salary, company product, customer information, category information and admin username, password. From above whole process I learned about different type of technology and application that are beneficial for me. Through the process I learn about different type of programming language which is used to make an application or a website such as C#, java, C++ and database like SQL server management system. Therefore, we have created an application i.e. inventory management system with all the help and guidance under the supervision of supervisor Er. Samrat Simkhada.

5.2 Limitation

We have designed this application as an initial version and tried our best design and develop the application with all possible information and features as much possible. However, this application has following limitation.

- a) It may not response quickly.
- b) It may not store huge amount of inventory.
- c) It may not be access by other user except admin permission.

5.3 Recommendation

Through my six months of observation and experience achieved during the OJT project work I have found the following recommendation to OJT workplace.

- a) It is highly recommended to OJT workplace to provide a better working computer devices.
- b) It is recommended to OJT workplace to provide a stable internet connection.

5.4 Suggestion

Through my six months of observation and experiences achieved during the OJT project work, I have found the following to be suggested to OJT workplace.

- a) It is suggested to OJT workplace to provide a better working computer devices.
- b) It is suggested to OJT workplace to provide a snacks for us.
